

35%

of organizations cite the cost of IT infrastructure as the greatest barrier or challenge they experience with AI projects.

To offset upfront capital traditionally required for comprehensive and powerful AI infrastructure platforms, agencies are looking to consume powerful AI infrastructure in a pay-as-you-go cost model. This will not only provide agencies with much needed budget relief as AI projects increase in scale and complexity, but it will also enable the right sizing of AI infrastructure depending on the phase of the project, from experimentation and development, to training and inference.
