

DataAdapt For Hortonworks®

5 Key Facts

DataAdapt for Hortonworks accelerates the deployment of a secure, enterprise-ready Apache™ Hadoop® platform that powers customer applications and delivers robust big data analytics

- 1 Accelerate collaboration and increase innovation through Hortonworks open source technology**
 - Enable enterprise organizations to deploy, integrate and work with unprecedented volumes of structured and unstructured data
 - Maximize data ingestion and insight by enabling enterprises to analyze data streams in massively parallel, shared-nothing architecture
 - Leverage batch and real-time stream-based analytics to act on data in motion
- 2 Address security and compliance requirements through a unified set of governance tools, including data classification, lineage, modeling and lifecycle management**
 - Enable platform agnostic governance controls to address compliance requirements
 - Centralize security administration to define, administer and manage security policies consistently, via an intuitive GUI across Hadoop
 - Scale governance for Enterprise Hadoop, driven by exchanging metadata with other tools and processes within and outside of the Hadoop stack
- 3 Enable real-world disaster recovery and business continuity for Hadoop through live replication of production data between data centers and into the cloud**
 - Enable active-active access to data across clusters, distributions and applications in near real-time
 - Deploy an effective, fast and secure Hadoop replication engine across multiple clusters, reducing network security risk and management
 - Ensure total data protection while drastically reducing Recovery Point Objective (RPO) and Recovery Time Objective (RTO)
- 4 Engage with data at the edge**
 - Aggregate edge data from dynamic and distributed sources of differing formats, schemas, protocols, speeds and sizes
 - Collect and move data more efficiently by prioritizing, enriching and/or transforming data at the edge to dynamically process critical data
 - Add streaming analytics to data flows without code, leveraging a GUI environment
- 5 Accelerate the deployment time of big data and advanced analytics from months to weeks with a preconfigured, pre-validated Hadoop solution, delivered as a solution or as-a-Service**
 - Expedite the installation, configuration and ingestion of data, significantly reducing complexity and time-to-value
 - Combine the value of complex enterprise software with the speed, ease and economy of an appliance-like solution
 - Simplify the management of Hadoop infrastructure with seasoned experts from ViON's Managed Services team
