

## **ViON Continues Capacity Services Leadership with ViON Demand™**

*ViON on Demand™ Delivers a Secure, On-Premise Private Cloud Solution that Enables Customers to Manage Purpose-Built IT Infrastructure that Scales Up and Down to Meet Business Requirements and Mission Demands*

**HERNDON, Va. – October 9, 2014 – [ViON Corporation](#)**, a market leader in the design, delivery and maintenance of mission critical IT infrastructure solutions, today announced the global availability of its cloud-based ViON on Demand™ offering. With ViON on Demand™ Federal, public sector and commercial customers can access highly secure compute, network and storage capabilities delivered through on-premise private clouds. The solution improves equipment utilization, speed to market, business agility and productivity while dramatically reducing the overall costs of purchasing and maintaining IT infrastructure.

ViON on Demand™ offers purpose-built IT infrastructure as an on-premise private cloud designed to meet customer specific performance, application and availability requirements. ViON on Demand™ is delivered as a capacity service through Service Level Agreements (SLA) with entirely predictable costs including maintenance, technology refreshes and managed services. The private cloud solution is also “adaptive,” expanding and contracting in response to client requirements so customers never pay for IT infrastructure or services they don’t need or use. ViON on Demand™ is managed by the customer like a traditional power utility and paid for as an operating expense, which dramatically reduces the time and costs associated with IT procurement and implementation.

ViON on Demand™ takes advantage of ViON’s Agile Cloud platform and the company’s three plus decades of experience in delivering secure compute, network and storage capabilities to customers around the world. ViON on Demand™ solutions are designed, implemented and supported by cleared resources that are highly trained and armed with the industry’s latest certifications and specializations.

“ViON on Demand™ offers dramatic cost containment on IT infrastructure system maintenance, replacement, data migration and staff training, because ViON assumes those responsibilities as the cloud vendor,” said Tom Frana, CEO of ViON. “In the event of emergent new technology or an increased need for capacity, ViON on Demand™ can deliver new solutions in a matter of days or weeks, not years.”

### **About ViON Corporation**

ViON Corporation designs, delivers and maintains mission-critical IT infrastructure solutions on an enterprise scale for the military, governments and commercial businesses, while offering the highest level of security available anywhere around the globe. ViON is well known for its cost-effective compute, network and storage capabilities, delivered on premise or through the cloud anywhere on earth.
