

# Mainframe-as-a-Service: 5 Key Facts

ViON's Mainframe-as-a-Service (MFaaS) is a unique opportunity for enterprises to maintain and keep pace with IT modernization of mainframes while adapting to a more flexible and agile infrastructure—using an as-a-Service financial model and support program.

1

## ViON's MFaaS financial model offers the opportunity to flexibly expand and upgrade mainframes without budgetary constraints

- ▶ Pay only for the capacity you use
- ▶ Unique year-in-service payment reduction program
- ▶ CapEx vs. OpEx funding model reduces costs for existing and future IT needs

2

## ViON's MFaaS ensures rapid modernization of Mainframes and IT infrastructure while maintaining critical existing operations

- ▶ Rapidly modernize IT with a comprehensive service catalog
- ▶ Increase operational efficiency with an on-demand capacity model
- ▶ Leverage leading edge technologies to modernize and optimize mainframes

3

## ViON's MFaaS allows for a simplified procurement process, reducing time to acquisition and enhancing operational efficiency

- ▶ Avoid complicated, difficult-to-understand bill of materials
- ▶ Acquire infrastructure without buying excess capacity
- ▶ Forestall the need to evaluate and select a separate maintenance contract

4

## ViON's MFaaS offers streamlined operations and implementations

- ▶ Institute comprehensive SLAs for performance accountability
- ▶ Obtain a single point of contact for infrastructure services
- ▶ Focus on innovative and strategic delivery of services instead of operations

5

## ViON's MFaaS satisfies the Cloud First Mandate while supporting the existing infrastructure on or off premises

- ▶ Reposition any mainframe into a cloud service platform
- ▶ Support legacy systems and leverage open source technologies
- ▶ Manage the mainframe on premises or off while mitigating the risk of workforce reductions in the future
