

Yellowbrick Data now offered under ViON's DCaaS

Yellowbrick Data provides a revolutionary approach to high performance analytics with the Ultimate Data Warehouse. Using the latest hardware and modern software approaches, Yellowbrick offers unparalleled performance, density and simplicity. Designed from the ground up for NVMe flash memory, Yellowbrick reduces traditional data warehouse foot prints by 20x while offering a 5 to 100x increase in performance. By using flash rather than DRAM to support query workloads, Yellowbrick reduces power consumption and overall cost. Yellowbrick has been replacing existing data warehouses and Hadoop SQL implementations such as Hive with massive downscaling of hardware footprint while increasing performance. Yellowbrick supports up to 2.4 petabytes of structured data in just 10U of hardware. Yellowbrick was also designed for simplicity and requires a fraction of the DBA resources. With Yellowbrick there are no indexes to maintain, statistics to manage or other mundane DBA tasks. Also, migrating from an existing data warehouse can take as little as one to two weeks. Yellowbrick is now offered as a service by ViON. ViON will procure, install and manage the Yellowbrick resource and offer a monthly fee based on consumptions rather than an upfront procurement. ViON and Yellowbrick work together to manage implementation and support needs to ensure a rapid time to solution.

ViON DCaaS

Acquiring and managing IT hardware, software and services to keep pace with rapidly changing data center requirements and mission demands is increasingly challenging. ViON's Data Center as-a-Service (DCaaS) removes the complexity and reduces the burden of managing these challenges by providing all facets of data center technology as a service, including storage, compute, network and hyperconverged infrastructure, as well as capabilities like data management, data protection, back-up, recovery, archiving and data analytics – all without the up-front investment. DCaaS helps accelerate and streamline delivery of capabilities and technology, enable modern IT delivery and reduce costs – all with the support of our expert project management team 24/7/365.

About ViON

ViON Corporation is a cloud service provider with over 38 years experience designing and delivering enterprise data center solutions to government agencies and commercial businesses. The company provides IT-as-a-Service solutions including on-premise public cloud capabilities to simplify the challenges facing business leaders and agency executives. Focused on supporting the customer's evolution to the next generation data center, ViON's Data Center as-a-Service offering provides innovative solutions from OEMs and disruptive technology providers via a consumption-based model. The complete range of as-a-Service solutions are available to research, compare, procure and manage via a single portal, ViON Marketplace™. ViON delivers expertise and an outstanding customer experience at every step with professional and managed services, backed by highly-trained, cleared resources. A veteran-owned company based in Herndon, Virginia, the company has field offices throughout the U.S. (www.vion.com).
