

Infrastructure as-a-Service

5 KEY FACTS

ViON® Infrastructure as-a-Service (IaaS) accelerates IT modernization and streamlines delivery of storage, compute, network and hyperconverged infrastructure with one of the largest portfolios of data center technologies priced as-a-Service. Infrastructure as-a-Service allows IT managers to create the next generation data center with greater control and oversight of requirements, procurement, workflows, contracts and key performance indicators. It also provides a radical new way for OEMs to deliver their products to market.

1 Accelerates the implementation of strategic IT initiatives

- Accelerate IT modernization with cloud-ready, [hyperconverged solutions](#) for data management, security and analytics delivered as-a-Service
- Consolidate data centers and reduce or eliminate cloud and IT sprawl with a services-based approach
- Free up key resources to dedicate to strategic IT pursuits

2 Speeds time to value of the next generation data center and IT modernization

- Upgrade to the next generation data center with storage, network, compute, converged and hyperconverged infrastructure delivered as-a-Service
- Choose from the largest technology portfolio delivered as-a-Service
- Accelerate IT modernization with convenience, simplicity and quality of ViON's as-a-Service experts

3 Enables IT organizations to optimize resources for greater efficiency

- Increase staff productivity and eliminate downtime with ViON's [managed services](#) option
- Free up headcount to focus on strategic IT initiatives
- Streamline technology refreshes and software updates, which can be managed by ViON

4 Allows for adaption to changing IT needs via deployment of new applications and enhancement of existing capabilities

- Provide flexibility for agile IT solutions to scale usage and capacity as needed to meet changing demands
- Derive greater value from data with advanced analytics delivered as-a-Service
- Ensure data security and accessibility with a complete suite of data management tools delivered as-a-Service

5 Mitigates financial barriers to IT modernization based on OpEx financial model

- Reduce or even eliminate expensive, up-front acquisition costs of IT hardware
- Pay only for resources used with a utility-based OpEx consumption model
- Increase efficiency, streamline procurement cycles and reduce the total cost of ownership with flexible financing options
