Short-Term Engagement			Long-Term Engagement	

Transformational Service Projects

ViON's Transformational Services accelerate your modernization efforts with consulting engagements, assessments, and on-site and remote residents focused on transforming legacy IT environments into modern value-driven solutions. Our experts work across a broad range of technologies to maximize your current IT investments and can also provide sound business and technical insights to help you make the right technology decisions. ViON Transformational Services delivers:

- Proven methodologies addressing technology, people and processes to ensure customer success.
- A long history of providing outstanding results for large scale customers with stringent requirements
- Partnerships with an extensive network of experts to augment ViON services
- Variety of tools and industry "best practices" to ensure your solution deployment success
- An experienced team accustomed to working in demanding environments

Data Center & Cloud Migration Services

ViON Migration Services provides the tools, technology and people to seamlessly move data and applications between infrastructure, data centers and the Cloud. Our 40 years of experience helps our customer mitigate complexity, increase efficiency, improve processes and lower the costs of moving data and applications from one technology to another.

ViON Enterprise Cloud Services

ViON Cloud Readiness Assessments™ can help migrate applications and workloads to the cloud, determine optimal configurations for cloud deployments and accurately estimate costs for the cloud. ViON delivers a unique ability to assess targeted applications and systems to determine which cloud provider is best for our customer's applications, how to optimally configure systems in the cloud and how to estimate costs for running those systems in the cloud, all prior to performing any migrations. ViON Cloud Readiness Assessment Services are delivered in three phases to help plan cloud migrations:

- 1. Discovery Phase:** ViON Data Center Migration Services discovers IT assets, workload characteristics, and dependencies between compute, networking and storage environments
- 2. Profiling Phase:** ViON Services consolidates workloads into profiles that will identify and build optimal cloud configurations
- 3. Playback Phase:** ViON Services uses synthetic workloads to simulate optimal performance and cost configurations in the cloud

ViON Enterprise Cloud™ (VEC) is a hybrid, multi-cloud management solution. ViON services deploys the ViON Enterprise Cloud to deliver automation and orchestration to the hybrid, multi-cloud enterprise. The ViON cloud and data center services team builds, deploys and integrates the ViON Multi-Cloud Orchestrator™ (VMCO), which provides a single-pane-of-glass view and management of the entire infrastructure, both in private and multiple public clouds. VEC combines Operations Management, Service Management and Business Management functionality into a single solution providing total control over the deployment, management, tracking and governance of their cloud environments.

ViON Managed Services

ViON Managed Data Center Services provides a dedicated managed services team for technology infrastructure, data analytic platforms, or cloud environments to help you manage your technology to the desired SLA and business requirements, reduce the complexity in your operation and maximize the value of your technology. Our managed data center services team helps customers gain value by managing:

- Data Center Infrastructure
- Private On-Prem & Off-Prem & Public Cloud
- Security monitoring, patching, and updates
- Big Data / Hadoop Security and Analytical Platforms
- Monitoring and Orchestration Layer Management
- Utilization and Performance Tuning

ViON Support Services

ViON provides global support services via U.S. based support centers staffed with fully cleared advanced support engineers. ViON Data Center Support Services include:

- **ViON Customer Engineering** – Our Customer Engineering experts provide onsite installation and break/fix infrastructure support for multiple vendors.
- **Secure Support Center** – Access to expert hardware and software engineers in support of storage solutions, Cloud infrastructure, data analytics platforms and data management solutions.

About ViON Corporation

ViON Corporation is a cloud service provider with over 40 years' experience designing and delivering enterprise data center solutions for government agencies and commercial businesses. The company provides a large portfolio of IT as-a-Service, including infrastructure, multi-cloud and artificial intelligence (AI) solutions. Focused on supporting the customer's IT modernization requirements, ViON's Enterprise Cloud is changing cloud management for the market, providing a streamlined platform to audit and control technology in an evolving multi-cloud world. The ViON Marketplace® allows customers to research, compare, procure and manage a full range of everything as-a-Service solutions from leading manufacturers via a single portal. ViON delivers an outstanding customer experience at every step with professional and managed services, backed by highly-trained, cleared resources. A veteran-owned company based in Herndon, Virginia, the company has field offices throughout the U.S. (vion.com).
